

Man AHL Diversified (Guernsey)

Monthly Report as of 31 March 2022

Inception Date : 04 January 2008 **Total Platform AUM :** (USD) 163,987,957 **ISIN :** GG00B29ZYR48

Fund Risks

Prior to investing in the Fund investors should carefully consider the risks associated with investing, investors should consider the following risks and where appropriate seek professional advice before investing: Market Risk, Counterparty Risk, Investment Objective Risk, Currency Risk, Liquidity, Financial Derivatives, Leverage, Emerging Markets, Model and Data Risk and Commodity Risk. More details can be found in the Risk Glossary.

Monthly commentary

Hopes that the conflict in Ukraine was at least less bad than originally perceived sent risk assets higher in March. Bond yields, which had dipped in the darkest days of the conflict, rose again particularly in the US as policymakers' comments suggested more urgent measures might be needed to quell inflation. Indeed, the spread between the 2-year and 10-year points went negative the end of the month - an indicator widely recognised to precede recessions. The Fund posted positive returns principally from commodity, FX, and fixed income trading, while credit detracted slightly. Commodities once more were top contributors for the Fund, led by energies where long positions in the oil complex were accretive, although for the second month in a row, long positions in carbon emissions detracted on perception of lower energy demand. Long metals positions also

generated positive returns, most notably gold but also nickel which gained on a well-publicized short squeeze at the London Metal Exchange. Trading in agricultural commodities was also positive, with corn and wheat top performers on the continuation of war in key crop exporter Ukraine. Losses were seen in coffee and cocoa trading. With such a strong commodity price backdrop it was perhaps no surprise that the Fund also saw positive returns from pairs involving long commodity currencies such as the Brazilian real and Australian dollar. Crosses against the Japanese yen were particularly benefited on news that the Bank of Japan planned to stick with its stimulus plan. Long positions in the British pound against both the Euro and US dollar incurred losses. Short fixed income positions also benefited, particularly in the US as senior policymakers on the Federal Reserve Open Market Committee signalled more hawkish intent. All tenors generated positive performance, but particularly SOFR and 2-year bond futures. A short in German Schatz futures, on the other hand, generated a loss. The Fund transitioned from short to small long in both equities and credit as the month progressed. Equities trading was marginally positive overall, with the top performer being a long in US energy companies while a long position in European banks detracted. Credit trading dipped into the red, however, with losses driven by long CDS positions in high yield indices on both sides of the Atlantic.

Valuation agent	Citibank Europe plc	Minimum investment	From USD 30,000
Performance fee	16.67%	Currencies	USD / EUR / CHF / AUD / RMB

¹ Sharpe ratio is calculated using a risk-free rate in the appropriate currency over the period analysed. Where an investment has underperformed the risk-free rate, the Sharpe ratio will be negative. Because the Sharpe ratio is an absolute measure of risk-adjusted return, negative Sharpe ratios are not shown as they can be misleading. ² The drawdown is the percentage drop in the price of an investment from its last peak price. The worst drawdown represents the greatest peak to trough decline over the life of an investment. ³ Expected Shortfall is defined as the average of all losses which are greater than or equal to VaR. ⁴ Leverage displayed here is calculated using the sum of gross exposure from each sector traded by the AHL Programme and therefore does not include leverage from FX hedging or cash management and in no way reflects regulatory leverage calculations. Exposure calculations used are the same as detailed in the exposure reference note with exposures netted at the underlying security level. ⁵ The figures are estimated and generated on a fund level and do not take into account the fees/interest/commission charges on any particular account. Differences may also occur due to slippage variation, portfolio changes, FX movements and post execution adjustments. Therefore the sum total of these sector indications will not necessarily equate to the reported performance for the month in question. ⁶ Exposure values represent the delta notional value of positions expressed as a percentage of fund capital. Where applicable, fixed income exposures are adjusted to a 10 year bond equivalent. Currency exposure within this table only reflects that of the Currency sector traded by Man AHL and does not include FX hedging or cash management. For credit default swaps, a short position represents buying protection and a long position represents selling protection. ⁷ The organisations and/or financial instruments mentioned are for reference purposes only. The content of this material should not be construed as a recommendation for their purchase or sale. ⁸ End of month (EOM) position. ⁹ The measurement of an option's sensitivity to changes in the volatility of the underlying asset. Vega represents the amount that an option contract's price changes in reaction to a one percent change in the volatility of the underlying asset. ¹⁰ CS01 is the impact on the fund in response to a one basis point increase in credit spreads. ¹¹ DV01 is the impact on the fund in response to a one basis point increase in interest rates. ¹² Please note that statistics have been calculated using the last weekly valuation of each month up to and including 30th June 2014. From that date forward a non-dealing calendar month end NAV has been used for the purposes of reporting monthly returns and performance statistics. ¹³ When 12 months of performance data is unavailable for a calendar year, partial year to date is shown. ¹⁴ The performance data is based on the reporting share class of the Fund (shown in blue in the NAV table). ¹⁵ The ISINs shown here are for tranche B of each class. Tranche A is closed to new investment for the AUD, CHF and RMB classes. NB the tranche A ISINs are as follows for each class: USD = GG00B29ZYR48, EUR = GG00B3CTZB13, CHF = GG00B3CTZD37, AUD = GG00B3X89L55 and RMB = GG00B3WXTG65. ¹⁶ Introducing Broker fee: The fee is payable to Man Investments AG which has been appointed as the Introducing Broker and is responsible for recommending appropriate Brokers to the Fund as well as actively managing these relationships, ensuring appropriate service levels as well as an adequate diversification of Brokers. For full details of fees and expenses which may be incurred by the Fund, including fees payable to members of Man Group, refer to the Fees and Expenses section of the Prospectus or any relevant Prospectus Supplement. Redemption Fee: For tranche A of each share class there is a fee payable on redemption within the first six years. During first two years: 2% of NAV, during the third or fourth year: 1.5% of NAV, during fifth or sixth year: 0.5% of NAV (refer to the Prospectus Supplement for full details).

Risk Glossary

Market Risk: The Fund is subject to normal market fluctuations and the risks associated with investing in international securities markets and therefore the value of your investment and the income from it may rise as well as fall and you may not get back the amount originally invested.

Counterparty Risk: The Fund will be exposed to credit risk on counterparties with which it trades in relation to on-exchange traded instruments such as futures and options and where applicable, 'over-the-counter' ("OTC", "non-exchange") transactions. OTC instruments may also be less liquid and are not afforded the same protections that may apply to participants trading instruments on an organised exchange.

Currency Risk: The value of investments designated in another currency may rise and fall due to exchange rate fluctuations. Adverse movements in currency exchange rates may result in a decrease in return and a loss of capital. It may not be possible or practicable to successfully hedge against the currency risk exposure in all circumstances.

Liquidity Risk: The Fund may make investments or hold trading positions in markets that are volatile and which may become illiquid. Timely and cost efficient sale of trading positions can be impaired by decreased trading volume and/or increased price volatility.

Financial Derivatives: The Fund will invest in financial derivative instruments ("FDI") (instruments whose prices are dependent on one or more underlying asset) to achieve its investment objective. The use of FDI involves additional risks such as high sensitivity to price movements of the asset on which it is based. The extensive use of FDI may significantly multiply the gains or losses.

Leverage Risk: The Fund's use of FDI may result in increased leverage which may lead to significant losses.

Emerging Markets: The Fund may invest a significant proportion of its assets in securities with exposure to emerging markets which involve additional risks relating to matters such as the illiquidity of securities and the potentially volatile nature of markets not typically associated with investing in other more established economies or markets.

Model and Data Risk: The Fund's Investment Manager relies on quantitative trading models and data supplied by third parties. If models or data prove to be incorrect or incomplete, the Fund may be exposed to potential losses. Models can be affected by unforeseen market disruptions and/or government or regulatory intervention, leading to potential losses.

Commodity Risk: The Fund may have exposure to commodities, the value of which can be volatile and may carry additional risk. Commodity prices can also be influenced by the prevailing political climate and government stability in commodity producing nations.

Investment Objective Risk: There is no guarantee that the fund will achieve its investment objective.

Important Information

The value of an investment and any income derived from it can go down as well as up and investors may not get back their original amount invested. Alternative investments can involve significant additional risks.
